- 7 RESULTS

### OBJECTIVE OF THE PROGRAM

• The objective of the Flight Management System (FMS) in C++ is to develop a software application that can effectively manage and automate various aspects of flight operations such as flight planning, navigation, communication, and monitoring. The FMS should be able to accurately calculate flight paths, fuel consumption, and other critical flight parameters while adhering to safety regulations and industry standards. Additionally, the system should provide user-friendly interfaces for pilots and ground crew to interact with, while maintaining high levels of system reliability and efficiency.

MODULES OF FLIGHT MANAGEMENT SYSTEM

- STRUCT
- INSERT
- SEARCH
- SHOW
- UPDATE
- DELETE
- LOGOUT

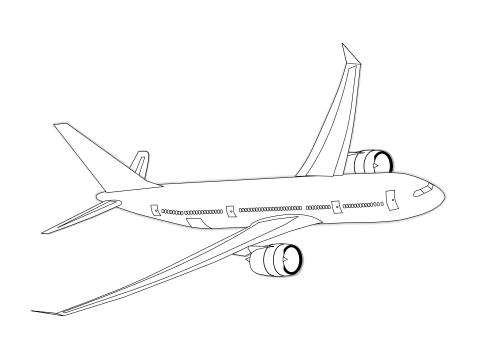

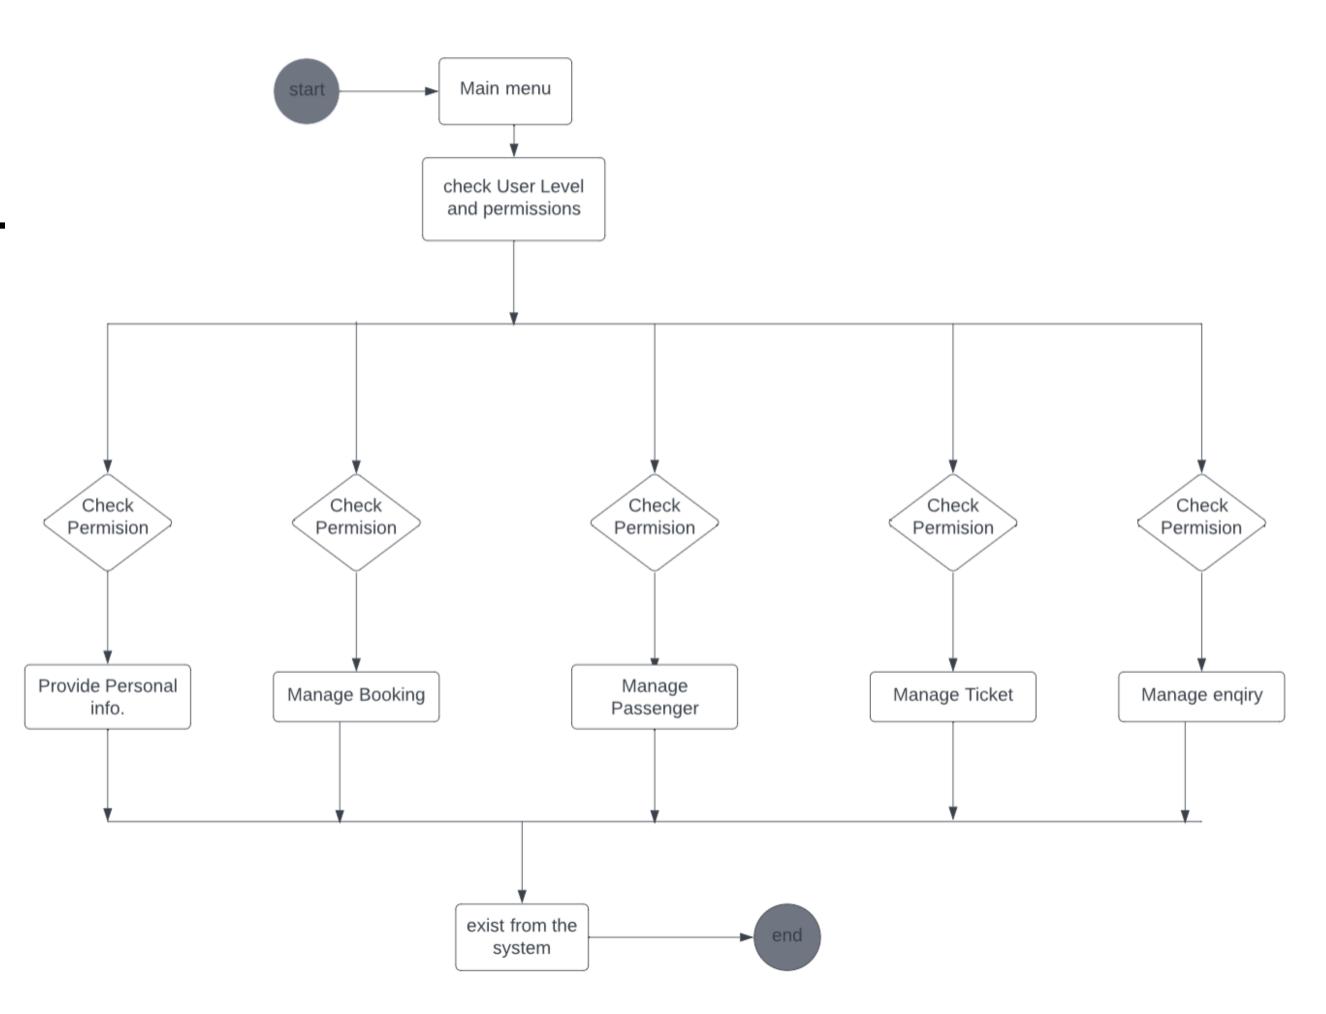

First, the programme displays the Main menu, which comprises [1.add the Customer Details, 2.flight Registration, 3.Ticket and Charges, 4.Exist] options. If the user selects option 1, he or she will be prompted to provide personal information such as age, gender, and address. 2 If the user selects option 2, he or she will be asked to select a flight. 3 If the user selects option 2, he or she will be asked to select a flight.aAfter picking a flight, the user will be able to examine the availability of flights as 4 well as their prices. After that, if the user selects option 4, the user will receive aeroplane tickets IN PDF FORMAT. 5 option 5 for quieting the interface 6
